DP

D&C DP optimization

```
1 /**
2  Let opt(i, j) be the value of k that minimizes the above
   expression. Assuming that the cost function satisfies
   the quadrangle inequality, we can show that opt(i, j)
   <= opt(i, j + 1) for all
3  i, j. This is known as the monotonicity condition. Then, we
   can apply divide and conquer DP. The optimal "
   splitting point" for a fixed i increases as j
   increases.
